SYNTHETIC JUDGING SAMPLE - NO REAL BUSINESS OR PERSONAL DATA

Judge guide: one story, two pages

LedgerProof gives a small business reviewable books and a cash outlook.

ALL DOCUMENTS ARE FICTIONAL. No file proves a real payment, credit pull, agent run or x402 settlement.

QUICKEST DEMONSTRATION
1. Open https://ledgerproof-one.vercel.app and start the finance demo.
2. Go to Accounting workbench > Import settlement CSV. Choose 03-settlements/00-main-demo.csv.
3. Show the $9,670 balanced deposit, $50 unexplained difference, and ambiguous $2,500 allocation.
4. Inspect the journal; approve the balanced deposit only.
5. Expand Receivables and corrections. Upload 01-credit-notes/INV-A-credit-8000-USD.pdf.
6. Run CREAO once on the hosted app, or click Run sample investigation locally for free practice.
7. Inspect the credit source and approve that credit only. Cash after week two changes from $16,000 to $8,000.
8. In Cash forecast, model INV-A arriving on 2026-11-09. Week-two cash changes to -$4,000.
9. Model the default $3,000 expense: week-two cash becomes -$7,000.
10. Compare a recovery plan and review the unsent follow-up draft.

USE A FRESH DEMO FOR EACH ALTERNATIVE FILE
The examples are alternatives, not one bulk import. Do not upload every credit or receipt into one workspace.
The application has a 30-document workspace limit and a 100-row settlement limit.
Uploading an ordinary reference invoice through the credit-note uploader is not supported.
Bank receipt CSV and settlement CSV have different headers and different import controls.

FOLDERS
01-credit-notes: supported, text-based credit PDFs matching seeded invoices.
02-bank-receipts: one new bank receipt per CSV, ready for investigation and approval.

SYNTHETIC JUDGING SAMPLE - NO REAL BUSINESS OR PERSONAL DATA

Judge guide: one story, two pages

03-settlements: matching, missing evidence, ambiguity and high-volume source sets.
04-safety-cases: intentional rejections, over-allocation, duplicate IDs and untrusted text.
05-reference-only: original invoices, historical ledger, bank snapshot and obligations. Read, do not upload.
06-vendor-context: manually enter the fictional vendor charge into the optional evidence check.

SPECIAL SEQUENCES
Import 03-missing-fee.csv, then append 04-missing-fee-evidence.csv in the same workspace.
The documented $20 fee changes that deposit from variance to ready; it is not inferred by AI.
To demonstrate duplicate prevention, re-import the same accepted file and inspect the rejection.

EXPECTED RESULTS
manifest.json and expected-results.csv list every file, its workflow, expected outcome and limitations.
These amounts are independently authored and validated with the accounting engine and PDF/CSV parser.
CREAO and Claude may phrase findings differently. This pack does not measure model accuracy.
For a fresh checkout, run npm ci then npm run demo with Node 22. No API keys are needed.
Click Run sample investigation for the explicitly labeled local deterministic rehearsal.

PARTNER CHECKS
CREAO: investigates receivables; does not approve corrections.
Claude: reviews accounting treatment with cited source IDs; calls use existing credits.
CRS: use official fake consumer personas in Check payment terms, not the Cedar business customers.
Coinbase + Exa: inspect a live wallet and unpaid quote; a funded wallet is needed for a paid search.
Public vendor documentation does not prove a specific charge is valid.

SYNTHETIC JUDGING SAMPLE - NO REAL BUSINESS OR PERSONAL DATA

Judge guide: one story, two pages

Convex: keeps the shared source records, decisions and provider budgets.

Reset changes only your current synthetic workspace. No real emails or business payments are sent.
